

## HDPE

In 1988 the Plastic Bottle Institute of the Society of the Plastics Industry established a system for identifying plastic containers by plastic type. The purpose of the "chasing arrows" symbol is to promote plastics recycling. The chasing arrows enclose a number, which aids in the plastics identification and sorting process.

**HDPE (high-density polyethylene) Used in milk, juice, water, soap and laundry product bottles and caps. HDPE is also used in the production of crates, tubs and trays, drums, pipes, and wheelie bins.**
